

Client: Abbeyfield School

Industry: Education

**EMC<sup>2</sup>**  
where information lives<sup>®</sup>

*“Rather than just focussing on the sale of the technology, 101 provided a consultative and knowledgeable approach, visiting us to evaluate our requirements on site, and providing detailed specifications of the options available to us and what the key benefits of each option were.”*

Head of IT  
Abbeyfield School

## Challenge

The past few years have seen Abbeyfield School struggle with its data storage, as it had no central server in place and numerous disparate and temporary systems were being used to accommodate vital databases and information portals, as well all manner of academic material. Desktop computers were being used as storage systems and the storage space was rapidly running out.

## Solution

101 Data Solutions installed an EMC VNX 5300 SAN central storage array, providing a centralised, easy to use expandable storage solution. It integrates all Abbeyfield School’s vital data and provides storage and back up for all of the shared areas and vital databases, all central to critical services provided within the school.

## Results

- Provides cohesion to the current data stored
- Added security of back-up provisioning with the potential for additional capability in the future
- Enabled a central pool of easy to use expandable storage solution

## EMC

EMC provides the systems, software, and services to leverage one of your most strategic assets—your business data. EMC’s goal is to optimize your information infrastructure to meet growing demands for enterprise content management, security, archiving, storage, and virtualization.

## Manage Data Better with 101 Data Solutions

101 Data Solutions can help you with managing data better. We look at the root cause of your data issues and apply our knowledge and products to help you with business efficiency.

Our UK wide network of fully accredited and experienced Data Storage experts work hard to offer the right solution for your business. With a full range of installation, project management and support services across all of our products, we offer industry leading solutions suitable to your technology and business needs.
